Schärfe System sets the standard:
both in technology and supplies.

CASY[®] cups: cell counter cups with lids

CASY supplies are specially matched to the standardized CASY devices. Only the exclusive and regular use of CASY supplies guarantees long-term standardization of measurement results, as well as the long-term stability and optimal functionality of the equipment.

CASYcups are measurement cups with lids for CASY Cell Counter + Analyser Systems. The material properties as well as the size and volume of CASYcups are optimally adapted to the preparation of cell culture samples. CASYcups are disposable. The repeated use can falsify the measurement results.

Description

CASYcups are made of Polypropylene (PPN) and measure 22 x 65 mm. Their filling volume amounts to 15 ml. They are milky in color, but transparent. CASYcups are heat-resistant up to 80°C and slowly inflammable.

Properties

- The material prevents hardly any cells to adhere at the wall of the cup.
- CASYcups are particle-pure and biologically inert.

Packaging

CASYcups with lids are available directly from Schärfe System in handy packages of 1,800 pcs.

Shelf-life and storage

CASYcups must be stored at room temperature in a dry and dust-free place. The shelf-life is unlimited.

Waste disposal

Disposal must be effected in accordance with the cell culture laboratory regulations.
